SUMMARY

Final-year B.Tech CSIT student focused on end-to-end AI engineering — building retrieval-augmented and agentic AI systems from backend API design through model integration, evaluation, and deployment. Hands-on experience with Python, XGBoost, BERT, FastAPI, PostgreSQL, and LLM-based RAG architectures, plus applied ML research at IIT Ropar. Certified by AWS, Oracle OCI, and NVIDIA.

EXPERIENCE

MERN Stack Development Intern | AnnamAI, IIT Ropar *May 2026 - Jul 2026*
MongoDB | *Express.js* | *React* | *Node.js* | *REST API* | *JavaScript* | *Git*

- Developed full-stack web application features on the MERN stack (MongoDB, Express.js, React, Node.js), building responsive React interfaces and connecting them to backend services.
- Designed and implemented RESTful APIs in Node.js and Express.js with MongoDB data models, covering CRUD operations, request validation, and error handling.
- Used Git-based workflows, testing, and debugging to ship features and resolve issues across the stack.

PROJECTS

AgentHub | Personal Project | github.com/amaymishra1104/agenthub-ai *Aug 2026*
Next.js | *React* | *TypeScript* | *PostgreSQL (Supabase, pgvector)* | *Groq* | *HuggingFace* | *RAG* | *REST API* | *Tailwind CSS*

- Built a full-stack AI sales chatbot platform enabling users to create, configure, and deploy custom AI agents, using Retrieval-Augmented Generation (RAG) to ground responses in retrieved context from custom knowledge documents rather than model memory alone.
- Architected a serverless backend on Next.js App Router with authenticated REST API endpoints, implementing session-based authentication and per-user authorization (ownership checks) via Supabase Auth.
- Designed a semantic search pipeline using HuggingFace embeddings and PostgreSQL (pgvector) for vector similarity search, paired with the Groq SDK for low-latency LLM inference; modularized the RAG layer for extensibility across LLM providers.

Hire.IQ (AI Interview Copilot) | Personal Project | github.com/amaymishra1104/Hire.IQ *Jan 2026 - Mar 2026*
Next.js | *Node.js/Express* | *MongoDB* | *Clerk* | *Google Gemini* | *Monaco Editor* | *Deepgram* | *ElevenLabs* | *SSE Streaming*

- Built an agentic AI interview simulator using a 3-agent SSE streaming pipeline (Google Gemini) that generates adaptive, resume-personalized questions and scores answers in real time (0-10 scale) with a structured strengths/weaknesses breakdown.
- Engineered a Node.js/Express and MongoDB backend with Clerk-based authentication, serving a Next.js 16 (App Router) frontend deployed across Vercel, Render, and MongoDB Atlas.
- Implemented a live coding round (Monaco Editor, Piston execution across 8 languages) and a 2-way voice mode (Deepgram STT, ElevenLabs TTS), with persona-targeted interview customization and adaptive difficulty scaling.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Information Technology *Aug 2023 - Jun 2027*
Acropolis Institute of Technology and Research, Bhopal, Madhya Pradesh, India
Relevant Coursework: Machine Learning, Artificial Intelligence, Data Structures and Algorithms, Database Management Systems (DBMS), Statistics, Computer Networks

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, TypeScript
Frameworks & Libraries: TensorFlow, PyTorch, Scikit-Learn, HuggingFace Transformers, FastAPI, Flask, Next.js, React, Pandas, NumPy
Machine Learning & AI: Supervised & Unsupervised Learning, NLP, Deep Learning, LLM, RAG, Generative AI, Fine-tuning, Model Evaluation, XGBoost, Random Forest, BERT, Transformers, Feature Engineering, SMOTE, Cross-Validation, Hyperparameter Tuning
Systems & APIs: REST API Design, Authentication & Authorization, Distributed Systems (fundamentals), System Design (fundamentals), Serverless Architecture, Vector Databases (ChromaDB, pgvector)
Data & Tools: EDA, Statistical Modelling, Data Preprocessing, PostgreSQL, Supabase, Git, Jupyter, Kaggle, Oracle OCI

CERTIFICATIONS

- AWS Certified AI Practitioner - Amazon Web Services - June 2026
- Oracle Cloud Infrastructure (OCI) Data Science Professional - Oracle - Oct 2025
- Fundamentals of Deep Learning - NVIDIA - Apr 2026

ACHIEVEMENTS

- Recognized as a Kaggle Dataset Expert; ranked #280 out of 12,800+ participants through high-quality dataset contributions and community engagement.
- Competed at Amazon ML Hackathon, AI Manthan, and Ethos; 4th place at HackWise Hackathon (IIM Indore).
